In-Office Treatment Options

TIPPING

Before

Honestly I can not imagine practicing without the MTM system and tools. It is such an unbelievably simple concept to utilize in your day to day affairs. It eliminates costly lab bills, is extremely efficient with my time, but more than anything else, helps patients to improve their alignment and achieve the results that they were hoping for.

Neil Warshawsky, DDS, MS, PC
Diplomate, American Board of Orthodontics

Total treatment time: less than 4 months

The Essix MTM technique is a great adjunct for a general practice whether you're currently treating simple cases or comprehensive orthodontic cases. What a logical, straight-forward concept! We have had such great success with the technique that it will be included in our orthodontic course next year!

Having the ability to do minor tooth movement at such an affordable price to my patients yet still profitable to my practice is so important. MTM® is a perfect addition to any practice doing cosmetics and/or orthodontics.

BODILY MOVEMENT

Before

After

This case is nearing completion within 4 months time. This 32 yr. old patient had previous orthodontic treatment as a teenager and her teeth lapsed. I was able to offer her an easy, cost-effective solution and most importantly, provide her an "in-office" procedure that is predictable and rewarding!

Lori Trost, DMD
Center for Contemporary Dentistry • Columbia, IL

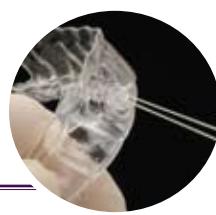

Total treatment time: approximately 4 months

SPACE CLOSURE
